

Canine Vaccination Consent Form

For: _____

At Novey Animal Hospital, we believe your pet's vaccination needs should be tailored to their specific lifestyle. Your veterinarian will use the information you have provided below to critically evaluate your pet's needs for vaccination and make recommendations for their care.

Core vaccinations, as established by the American Veterinary Medical Association, are vaccines that all dogs should receive regardless of lifestyle.

Non-core vaccinations should be administered to your dog based on risk of exposure.

Core Vaccinations:

Rabies (required by Florida Law)
DHP/PV (distemper, hepatitis, parainfluenza, parvovirus)

Non-Core Vaccinations:

Bordetella and Canine Influenza Vaccinations

- Comes into contact with a dog of unknown vaccination status.
- Is dropped off for care at a veterinarian's office, a groomer, or stays at a boarding facility, even only occasionally.
- Visits a dog park, pet store, or community park frequented by other dogs.
- Attends obedience or agility classes, competes in dog shows, field trials, or agility competitions.

Leptospirosis

- Goes outdoors in an area where raccoons or possums are frequently seen or known to reside.
- Is exposed to cattle, pastureland, or areas that are frequented by livestock species.
- Is exposed to environments where water accumulates such as ponds, streams, lakes, puddles

Lyme

- Has had a tick (live or dead) recently.
- Will be traveling out of the state. When? _____ Where? _____

Please check below if your pet has had either of the following:

- My dog has had a reaction or possible reaction to vaccinations in the past. (Please describe)

- My dog has a known intolerance/ reaction to medication(s). Please list medications:

Our patients are administered either Previcox (*firocoxib*) or Metacam (*Meloxicam*) at the time of vaccination to prevent pain and inflammation at the site of vaccination. Please notify us if your pet experiences vomiting or diarrhea after their visit.

Vaccination Protocols:

(Your veterinarian will circle recommendations)

Rabies and **DHP/PV** vaccines should be administered at 3 year intervals after initial boosters.

Bordetella vaccine should be administered every six to twelve months.

Canine Influenza vaccine should be administered every six to twelve months.

Leptospirosis and **Lyme** vaccines should be administered annually.

<u>Protocol A</u>	<u>Protocol B</u>	<u>Protocol C</u>	<u>Addition</u>
Rabies	Rabies	Rabies	Lyme Vaccine
DHP/Parvo	DHP/Parvo	DHP/Parvo	Canine Influenza
	Bordetella	Bordetella	
		Leptospirosis	

*** **Intestinal Parasite Exam:** Recommended twice a year, to check for intestinal parasite eggs and protozoal infection.

*** **Heartworm/Ehrlichia/Anaplasma/Lyme Combo Test:** Checks for the three most common tick-borne diseases, as well as Heartworm infection.

This test is required annually in order to purchase monthly Heartworm Preventative.

I have read and understand the above protocols recommended and understand that one will be recommended by my veterinarian based on my pet's lifestyle. I understand that it is my responsibility to provide full disclosure of lifestyle and to notify Novey Animal Hospital if my pet's lifestyle changes.
